CASCADE PHYSICAL THERAPY
Progress Note · Visit 14

Patient: David Okafor DOB: 11/30/1992 MRN: 55208
Date: 03/10/2026
Therapist: Marcus Chen, DPT NPI: 1881204736

SUBJECTIVE: 33-year-old male, status post ACL reconstruction (right knee, 01/20/2026, autograft). Now 7 weeks post-op, PT visit 14 of a planned 24. Reports improved confidence with stair negotiation. Denies giving-way episodes. Pain 2/10 at rest, 4/10 with single-leg loading.

OBJECTIVE: Right knee ROM 0·128 degrees (was 0·115 at visit 8). Quad strength right 4/5 versus left 5/5. Effusion 1+ (down from 2+). Able to perform single-leg squat to 45 degrees with mild valgus deviation · not yet cleared for running. Lachman's test negative, graft intact.

ASSESSMENT: Healing appropriately but quad strength deficit and movement quality deficits persist. Continued skilled PT is medically necessary per post-op ACL protocol; unassisted discharge now risks graft strain and poor long-term outcome.

PLAN: Continue PT 2x/week for 8 additional visits, then re-evaluate. Authorization request for visits 13·20 was submitted by our office on 02/26/2026; we have not received a determination. Progress notes were faxed to the payer on 03/02/2026. Will continue current protocol per surgeon's orders (Dr. Ito).
