HARBOR BEHAVIORAL HEALTH
Therapy Progress Note

Patient: Aisha Rahman DOB: 05/17/1989 MRN: 77034
Date: 03/31/2026
Provider: Priya Nair, LCSW NPI: 1992387455

SESSION: Individual psychotherapy, 60 minutes (session 6 of 6 billed).

PRESENTATION: 36-year-old female in treatment for generalized anxiety disorder with panic features (F41.1). GAD-7 score improved from 15 (severe) at intake in January to 9 (moderate) today. Reports fewer panic episodes (1 this month versus weekly at intake). Sleep improving. Continues to struggle with anticipatory anxiety around work travel.

INTERVENTIONS: Cognitive-behavioral therapy · cognitive restructuring of catastrophic thoughts, interoceptive exposure practice, relapse prevention planning.

ASSESSMENT: Good progress on measurable goals but not yet at treatment completion. GAD-7 of 9 indicates ongoing symptomatic anxiety. Patient reports no in-network therapist within 40 miles had a new-patient opening before June; she contacted four listed providers before starting treatment here.

PLAN: Continue weekly CBT x 6 more sessions targeting work-travel avoidance. Next GAD-7 at session 10.
